

PRIVACY POLICY

Effective Date: May 2026 | Document Ref: NVX-PRI-2026-V1

At NovelleyX, we operate on a model of absolute clarity, trust, and premium security. This Privacy Policy details how our digital studio collects, manages, and secures data across all custom websites, personal branding ecosystems, and strategic business automation solutions developed by our team.

1. Strategic Data Collection

We collect minimal, highly structured operational data necessary to perform our elite development, marketing, and SEO operations. This includes contact parameters, business objectives, branding preferences, and technical integrations submitted through our Client Audit systems.

2. Premium Client Protection

All databases, hosting environments, and CRM automation channels engineered by NovelleyX employ top-tier industrial security standards. We protect client IP and personal data with:

- **Military-Grade Encryption:** All contact information and API parameters are encrypted in transit and at rest.
- **Secure Infrastructure:** We host systems on enterprise-grade cloud networks (AWS/Vercel/Firebase) with active firewall rules.
- **Zero Third-Party Leaks:** Your strategic insights and lead information are never sold, traded, or shared.

3. Client Autonomy

As an elite brand or high-performing developer utilizing our systems, you retain full rights over your data. You may request the export, modification, or complete deletion of your files from our studio databases at any point.

4. Contact Strategy

For inquiries regarding our security audits, data encryption protocols, or server logs, reach out directly to our systems administrator at novelleyx@gmail.com.
